Our range of more than 30 collections ensures the inexhaustibility and differentiation of our offer: we are able to meet the most varied needs of contemporary architectural projects. The broad range of sizes allows for an easy adaptation to the spaces and the many colours available multiply the possible creative combinations.

What we offer our customers are integrated solutions of floors, walls, technical applications, ventilated facades, raised floors, facades and surfaces for outdoor living. This portfolio of opportunities makes us the perfect partner for a variety of different projects, from large public areas (airports, underground stations, and shopping centres), commercial venues (residences, offices, factories) as well as the residential segment.

Mirage porcelain stoneware is a material featuring high technical and aesthetic performance. The slabs are obtained via a vitrification process, which means the complete fusion of sands, quartz, feldspars, clays, and natural colouring oxides in a sole material: selected raw materials that once fired at temperatures higher than 1250 °C create a full-body compact product, extremely hard and with unrivalled mechanical features.

As well as constantly improving the quality of our products, we have always actively involved in reducing the environmental impact of our products and factories to the absolute minimum. From the control of toxic emissions and energy consumption to the recycling of industrial waste, our work has always been based on concrete ethical principles in order to protect the world in which we live, to improve the quality of our lives and those of future generations. This effort can be seen in the numerous certifications obtained by Mirage, such as the Ecolabel and LEED classifications for all ceramic collections, as well as the compliance with the IPPC regulations, a testament to the respect of strict requirements and the use of the best technology available for industrial processes.
